Shubham Karoti Maitreyi Gurukula - Student Journey Tracking System

1. Purpose

At any point, the Gurukula should be able to answer: “Who is this child, where is she in her journey, how is she growing, what are her strengths, what needs attention, what support has been provided, and how has she progressed over time?”. Hence, we need a simple mobile-based system that maintains a complete record of journey of every child from admission through the Gurukula years and beyond. The system should help teachers and management understand, support and nurture the child along with maintaining academic progress.

This system should be able to store the following and we should be able to see the child's journey/growth over time.

- Admission Process
- Academic progress (Grade-wise)
- Health and well-being
- Skills and Talents
- Responsibilities held
- Participation in different competitions and achievements
- Family Information
- Important corrective actions taken and follow-ups
- Maintain Alumni Interaction

2. Admission Process

Before a child joins the Gurukula, her details should be maintained as part of the admission process. At this stage, she should not yet be considered a Gurukula child/student.The system should maintain the details of children who are interested in joining the Gurukula and track their progress through different stages of the admission process.

The following should be maintained:

- Basic details of the child and family.
- Contact details of parents/guardians.
- How the child/family came to know about the Gurukula.
- Date on which the enquiry/application was received and date of Interview.
- Interviews, assessments or other activities conducted as part of the admission process.
- Observations made during the admission process.
- Current stage/status of the admission process. (Application Received, Selected for Interview, Invited, Selected as Student, Not Interested, Not Eligible, Admission Not Taken, To be Followed Up Later)
- Next action to be taken and follow-up date.

Once the admission process is completed and the child joins the Gurukula, the same record should be converted into a Gurukula Child record. The information collected during the admission process should continue to be available as part of the child's history.

3. Student Information

For each child following information should be available in the system

Profile Information

- Unique child profile with admission details, personal information, education history and Gurukula journey.
- Parent/guardian profiles, contact details, occupation, skills, interests and family information.
- Ability to record family members' involvement in Gurukula/Seva in the future.
- Important documents, photographs, certificates and other relevant records.
- Historical record that remains available as the child moves from one grade/year to another.

Learning Record

- Academic learning and subject-wise progress.
- Responsibility and participation.
- Skills, talents, interests, hobbies and special abilities.
- Achievements, competitions, performances, certifications.

Other

- Health and general well-being records.
- Teacher/mentor observations, concerns, corrective actions and follow-up.

4. Reports

- Individual child profile and year-wise journey.
- Class/group/grade-level summaries and trends.
- Children requiring attention or follow-up.
- Progress across academic, holistic and skill dimensions.
- Achievements and participation reports.

5. Primary Users

- Teachers / Mentors – quick daily or periodic observations and updates.
- Academic / Gurukula Coordinators – monitor progress, identify concerns and plan corrective actions.
- Management / Trustees – trends, outcomes and institutional reporting.

6. Usage

- Teachers should be able to record a short observation from a mobile phone quickly and also schedule follow-ups.
- Each observation should be tagged by date, time and user.
- Designed primarily for Android/mobile use; desktop/web access may be provided for management.
- Very simple interface with minimum typing and maximum use of selections, tags and short notes.
